

SOBHA REALTY DELAYED TRANSACTION & REVENUE EXPOSURE ANALYSIS

Identifying and comparing recorded delay patterns across projects and property types.

THE BUSINESS PROBLEM

Recorded transaction delays are concentrated in specific projects and property groups.

1. The Challenge

Sobha Realty's transaction data contains a significant number of transactions recorded under delayed procedures.

3. Our Objective

Use SQL analysis to identify delay patterns and highlight areas that may deserve further business review.

2. What We Want to Understand

- Where are recorded delays concentrated?
- Which projects and property types show higher delay rates?
- How much transaction value is associated with delayed transactions?

IMPORTANT NOTE: "Delayed" refers to a recorded transaction status in the dataset, not confirmed late handover.

DATASET & DATA PREPARATION

DATASET OVERVIEW

105,283

Original Records

23

Original Columns

116

Original Projects

2018-2023

Data Period

DATA PREPARATION & PIPELINE

- Removed duplicate rows to ensure dataset integrity.
- Removed missing or invalid project names.
- Removed records with price = 0 or blank.
- Cleaned and removed personal information fields for confidentiality.
- Kept Buyer-side transactions only to eliminate double counting.
- Converted transaction values into numeric format for analysis.
- Standardized mixed and inconsistent date formats.

Resulting Dataset

46,763 FINAL BUYER-SIDE TRANSACTIONS

Why Buyer-Side?

Each transaction appears twice (buyer/seller) in the raw DB. Buyer-side records were isolated to avoid double counting transaction volumes and values.

HOW WE ANALYZED THE DATA

KEY QUESTIONS

- 01** How did the recorded delay rate change from 2018 to 2023?
- 02** Which project + property type had the highest number of delayed transactions?
- 03** Which high-volume project had a low recorded delay rate?
- 04** Which projects had the highest share of transaction value associated with delays?
- 05** Do property size categories show different recorded delay rates?

SQL APPROACH

- | | |
|----------------------|---|
| WHERE | Selected relevant records |
| CASE WHEN | Identified recorded delayed transactions |
| GROUP BY | Compared years, projects and property types |
| COUNT/SUM/AVG | Calculated counts, values and averages |
| ORDER BY | Ranked results |
| CTEs | Supported multi-step analysis |

ANALYSIS FLOW

DATASET OVERVIEW: 1 IN 4 BUYER-SIDE TRANSACTIONS WERE RECORDED AS DELAYED

DELAYED SHARE

27.12%

Of all recorded buyer-side transactions fell under delayed procedures.

SUPPORTING METRICS

12,683

Delayed Transactions

46,763

Total Buyer-Side Transactions

SHORT INTERPRETATION

Recorded delays were not an isolated pattern, with more than one-quarter of buyer-side transactions classified under delayed procedures.

VISUAL COMPARISON

Delayed: 27.12%

Not Delayed: 72.88%

RECORDED DELAY RATE REACHED 33.15% IN 2023

SHORT INTERPRETATION: **The recorded delay rate fluctuated across the years, reaching its highest level in 2023.**

PEAK DELAY RATE

33.15%

RECORDED IN 2023

CREEK VISTAS – FLAT HAD A 50% RECORDED DELAY RATE

RECORDED DELAY RATE

49.98%

Nearly half of all transactions recorded for the Sobha Creek Vistas – Flat combination experienced delayed status.

SUPPORTING METRICS

1,067

Delayed Transactions

2,135

Total Transactions

INTERPRETATION

SHORT INTERPRETATION: Recorded delays were strongly concentrated in the Sobha Creek Vistas – Flat combination.

POTENTIAL ACTION: This project/property combination may warrant closer review to understand the underlying reasons.

VISUAL COMPARISON

Delayed: 1,067

Total Transactions: 2,135

HIGH VOLUME DID NOT ALWAYS MEAN HIGH RECORDED DELAY

SHORT TAKEAWAY: **Both projects had high transaction volumes, but their recorded delay rates were very different.**

PROJECT PERFORMANCE

SOBHA HARTLAND – THE CREST

3,472

TOTAL TRANSACTIONS

0%

RECORDED DELAY RATE

Exemplary timeline maintenance with zero recorded project delay transactions.

VS

PROJECT PERFORMANCE

SOBHA CREEK VISTAS

3,127

TOTAL TRANSACTIONS

57.85%

RECORDED DELAY RATE

More than half of the recorded transactions experienced delayed status.

POTENTIAL ACTION

The better-performing project may provide useful practices for further investigation and comparison. *Note: This does not necessarily imply a direct causal relationship.*

SOME PROJECTS SHOWED VERY HIGH TRANSACTION VALUE EXPOSURE

MAIN FINDING: Four projects in Mohammed Bin Rashid Al Maktoum City had 100% of their recorded transaction value associated with delayed transactions.

MAXIMUM EXPOSURE

100%

Four key projects had their entire recorded transaction value associated with delayed transactions.

SOBHA CREEK VISTAS

77.56%

RECORDED DELAY RATE

AED 1.59B

EXPOSED TRANSACTION VALUE

INTERPRETATION

POTENTIAL ACTION: These highlighted project portfolios warrant active operational monitoring and closer strategic review.

VALUE METRICS

Analyzed metrics trace the direct total of transaction value associated with delayed transactions across specific developers. *Calculations focus strictly on active recorded pipeline schedules.*

MEDIUM-SIZED PROPERTIES SHOWED THE HIGHEST RECORDED DELAY RATE

SHORT INTERPRETATION: **There was no simple “smaller property = more delays” pattern. Medium-sized properties had the highest recorded delay rate.**

PROPERTY SIZE COMPARISON

MEDIUM

800–1,500 sqft

53.34%

SMALL

Under 800 sqft

26.61%

LARGE

1,500+ sqft

24.91%

KEY FOCUS

MEDIUM PROPERTIES AT 53.34% DELAY

This segment registered the highest proportion of pipeline transaction delays compared to both smaller and larger property size categories.

DATA PROFILE

Calculations represent the proportion of delayed transactions within each respective property size tier. *Figures focus strictly on the designated square footage brackets.*

WHAT COULD SOBHA REVIEW NEXT?

RECOMMENDATION 1

SOBHA REALTY MANAGEMENT

May consider reviewing Sobha Creek Vistas, specifically Flat transactions, to investigate underlying operational flow and milestones.

Why: 1,067 of 2,135 recorded transactions were delayed.

RECOMMENDATION 2

PROJECT MANAGEMENT TEAMS

Could test and study better-performing projects, such as The Crest, to identify comparative delivery practices and process optimizations.

Why: The Crest had 3,472 transactions with 0% recorded delay.

RECOMMENDATION 3

OPERATIONS & FINANCE TEAMS

Further investigation warrants prioritizing projects and property groups with high recorded delay rates and transaction-value exposure.

Why: These critical risk areas were highlighted by the analysis.

LIMITATIONS & DATA SCOPE

- Recorded delayed status does not confirm late property handover
- Delay reasons, expected, and actual handover dates are not available
- Data covers transactions strictly within the 2018–2023 timeframe

THANK YOU

Feel free to ask any questions or share your feedback.
